**Functional Requirement / Suggestions :**

1. The "Online Form for New Electric Supply Connection" should have a "Languages" option to fill up the form.
2. **If Form Already filled, Click here for Payment**, "Click here" text should be highlighted or underlined

3. Should have a period on each Validation message.
    E.g. "Only Letters,Dot(.) and space allowed"

4. Validation messages of each field should be aligned properly.

5. For "Aadhar Card No" and "Nearby Reference Consumer No*" fields should throw warning messages like "Please enter Only Numbers./ Only Numbers Allowed.".
6. If User clicks on "No" for "**Whether power supply address is same as billing address**", New fields for the billing address should be opened just below this field.
7. Should have a title as "Billing Address" for new fields for billing addresses like "Power Supply Address".

8. Suggestion: In Dropdown style Can we add scroll up and down with a small dropdown box? And also we can add search functionality in dropdowns.
9. If the user selects the "Others" option for "Type of Premise" and "Category of Premise" then a new field should be opened just below this field to add the type of premise manually. e.g.

10. When User selects the "1st" option i.e. null in "Select Area" dropdown, there should not be a throw error.
    Now Throwing error "Error in ex.Try after sometime".
11. "Select Supply Voltage and Purpose of Supply." should not be displayed if already selected values for it. It happened when "Total Load (KW)" turned to zero.

12. On "Load Calculator" page should have a textbox for "No. of appliances" and "Load" for "Any Other" option.

13. When User clicks on the "Generate OTP" button, a pop-up message should be displayed on the screen as shown below.
    OTP is generating
    "We will send you OTP via mail or Mobile no. when OTP is ready.

14. While uploading Photo and signature, it should accept png and webp images also.
15. When the user selects the "Solar" option of "**Select Connection Type**", then the "Name of Consumer" field should be Enabled.
16. "Submit" button should be functional if the user enters input in some fields.
